## Overview

Do I need a 12V or 48V inverter?

Simply put, if you have a 12V system, you need a 12V inverter; a 48V system requires a 48V inverter. Standard Pure Sine Wave inverters simply change DC power to AC power. Inverter Chargers handle this function plus allow you to charge your batteries off shore power or a generator. Renogy's 3500W Solar Inverter Charger is designed for a 48V system.

What is a 12V sine wave inverter?

A 12V sine wave inverter is a device that converts DC power from a 12 volt battery or power source into AC power with a sine wave output. By using a 12V sine wave inverter, you can power AC devices and appliances using the DC power available from a 12 volt source.

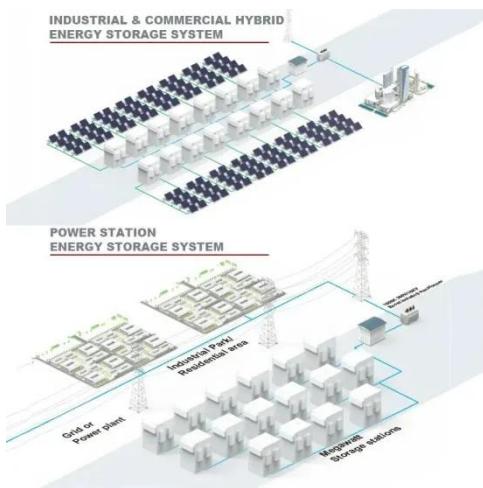

What is the difference between 150W and 48V pure sine wave inverter?

150W pure sine wave inverter adopts aluminum shell, makes the true sine inverter sturdier and helps it dissipate heat, which means it lasts longer. 48V DC to AC pure sine wave inverter can provide smooth, seamless and clean power, low noise and high safety. Led light and USB output port are equipped with this 48V pure sine inverter.

What is a high efficiency inverter?

[High efficiency conversion]: The inverter provides 12V 24V 48V 60V 72V DC to 110V-120V/220V-240V AC pure sine wave technology, with high conversion efficiency (>90%), low no-load loss, and more energy saving.
