

**EQACC SOLAR**

# 20kW Solar-Powered Container for Oil Refineries

**LFP 12V 200Ah**

## Overview

---

The purpose of this study is to investigate the potential use of solar energy within an oil refinery to reduce its fossil fuel consumption and greenhouse gas emissions. A validated ASPEN HYSYS model w.

Can solar energy drive crude oil refineries?

Employing solar energy to drive crude oil refineries is one of the investigated pathways for using renewable energy sources to support lowering the carbon emissions and environmental impact of operating the processing of fossil-based fuels.

Can a TRNSYS solar heating system be used in a refinery?

Using TRNSYS software, the proposed Parabolic Trough Collector (PTC)-based solar heating system paired with the boiler is modelled. Sensible thermal energy storage (TES) system is integrated into the refinery's process heating to handle the intermittent nature of solar energy.

Can solar energy systems decarbonize oil refineries?

Other studies in the literature considered coupling solar energy systems to oil refineries to decarbonize their operation. The applicability and feasibility of introducing a concentrated solar power (CSP) system to reduce partial reliance on process heaters of a crude oil refinery was studied by Danish et al.

How much energy does a 20 kW solar system save?

A 20 kW system in Texas powers pumps, saving \$50,000 yearly. In Saudi Arabia, a 10 kW system supports sensors along a 500-mile pipeline. Dust and heat are mitigated with self-cleaning coatings and robust designs. Siemens Solar's oil and gas solutions redefine energy use.
