3 7v cylindrical solar container lithium battery specifications

Overview

What is a 3.7V battery?

A 3.7V battery is fundamentally a rechargeable lithium-ion cell that delivers a nominal voltage of 3.7 volts throughout most of its discharge cycle. This consistency makes these batteries ideal for sensitive electronics that require stable power delivery.

How many volts is a lithium ion battery?

A fully charged 3.7V lithium-ion battery typically reaches approximately 4.2V, with the nominal 3.7V rating representing the average voltage during discharge. The cell is considered depleted when it reaches about 3.0V, though exact cut-off voltages vary by application.

What is a 16340 battery?

The 16340 battery (16mm x 34mm) is commonly known as the RCR123A and serves as the rechargeable counterpart to the disposable CR123A lithium battery. These compact cells offer: Their small size coupled with relatively high voltage makes them perfect for compact high-intensity flashlights, security devices, and photography equipment.
