

**EQACC SOLAR**

# **3D Communication 4GLTE Base Station Indicators**

## Overview

---

What are the key indicators of TK's 4G/LTE network?

More specifically, it is focused on analyzing the following key indicators: mobility, integrity and availability. The measurements are performed on a segment of the TK's 4G/LTE network in Pristina, consisting of 24 base stations. The notified indicators are measured at network level.

Can genetic algorithms optimize base station placement in cellular networks?

This work proposed and applied a field measurement-based genetic algorithms approach to optimize base station placement in cellular networks. The proposed method explores the combined impact of strong cellular networks influencing parameters, such as capacity, coverage, and transmit power in the base station placement process.

How cellular networks affect base station placement?

The proposed method explores the combined impact of strong cellular networks influencing parameters, such as capacity, coverage, and transmit power in the base station placement process. A genetic algorithm-based approach is selected as an optimization technique, because it can produce a robust and good set of optimal solution spaces.

What parameters are used for 4G LTE network measurements?

Parameters that become a reference for 4G LTE network measurements are RSRP, SINR, and Throughput parameters. Methods that can be used to solve the problem of bad spot 4G LTE network area is using physical method, the results of RSRP parameter optimization of 70.08% and SINR parameter of 78.13%.

## 3D Communication 4GLTE Base Station Indicators

### The Analysis of Key Performance Indicators (KPI) in ...

The measurements are performed on a segment of the TK's 4G/LTE network in Pristina, consisting of 24 base stations. The notified indicators are measured at network level.
