

**EQACC SOLAR**

# **40v solar panel with 12v water pump**

## Overview

---

Can a solar panel power a water pump?

Also, there is chance your solar panel might create more than 12v power, in which your water pump will get damage in long run. To avoid this situation, you can simply connect DC buck converter between your solar panel and water pump which will help to supply only upto 12v power to your water pump.

How do I connect a solar panel to a water pump?

To avoid this situation, you can simply connect DC buck converter between your solar panel and water pump which will help to supply only upto 12v power to your water pump. I'm doing a similar set up with a 50w 12v panel and 5w 12v pump.

Do I need a DC water pump if I have a solar panel?

A 12v 10w solar panel will create DC power. You need a DC water pump if you want to run it directly from your solar panel. Also, there is chance your solar panel might create more than 12v power, in which your water pump will get damage in long run.

Can a 12V pump run on a solar panel?

Buy a small, low power 12V pump. Connect it straight to the panel. It'll run most of the time when the sun is shining. It probably will work just fine like JRE says. But there could be a slight chance that the panel will over-volt the motor if the motor does not need the whole 10 Watts. @jigneshsorathiya that one won't work, it's for AC power.

How to Connect A Solar Panel to A Water Pump? Can I Connect A Solar Panel Directly to A Water Pump? How Many

Solar Panels Does It Take to Run A Water Pump? Does A Solar Water Pump Need A Battery System? You could connect a solar panel directly to a water pump. It is not a good idea, though. The erratic pulse of electricity produced by the solar panel will burn out the pump at some point. That process can take a few seconds to a few years. The point is that connecting solar energy directly to a water pump shortens the life of the pump. If the pump' See more on solvoltaics Electrical Engineering Stack Exchange
