620 solar panels on the roof

Overview

What is a rooftop solar system?

A rooftop solar system consists of solar photovoltaic (PV) panels mounted on the roof of a building. These panels absorb sunlight and convert it into electricity, reducing or even eliminating your dependence on traditional power sources.

What is solar panel roof mounting?

Solar panel roof mounting is the process of securely attaching photovoltaic panels to your home's roof structure using specialized mounting systems. This critical installation step determines both the safety and performance of your solar energy system for decades to come.

How does a rooftop solar system work?

Once permits are in place, the actual Rooftop Solar Installation begins. Mounting structures are fixed to the roof, solar panels are installed, and all components are connected. Wiring is done carefully, ensuring safety and reliability, and then the system is connected to your home's electrical panel.

How to install solar panels on a roof?

Use high-quality solar panel mounting brackets roof kits along with flashing, stanchions, and waterproof sealants with UV blockers. The bracket mount used for tile or asphalt roofs must be of the same material as the Mount type to prevent issues of leaks and slippage.
