# **6kW Solar System Design**

## Overview

---

### What is a 6.6kw Solar System?

A 6.6kW solar system offers a practical and financially rewarding way to harness renewable energy for your home. By understanding the components, energy production factors, and financial considerations, you can make an informed decision that aligns with your household's needs.

### How much space does a 6kW Solar System need?

A 6kW Solar Kit requires up to 450 square feet of space. 6kW or 6 kilowatts is 6,000 watts of DC direct current power. This could produce an estimated 850 kilowatt hours (kWh) of alternating current (AC) power per month, assuming at least 5 sun hours per day with the solar array facing South.

### How much electricity does a 6.6kw Solar System produce?

A 6.6kW solar system can produce between 24 to 29 kilowatt-hours (kWh) of electricity per day on average. The actual output varies depending on your location within Australia due to differences in sunlight hours and climate conditions. For example:

### What is a 5kw solar inverter?

Although your system may have 6.6kW worth of solar panels, don't be surprised if the proposed inverter for your system is only 5kW. On basically every electricity network in the country, 5kW inverters are pre-approved for grid connection which means that 5kW inverters are much more common to come across than 6kW ones.
