

**EQACC SOLAR**

# **Accra Industrial Energy Storage Subsidy**

## Overview

---

Will solar power help Ghana achieve 100% electrification rate by 2030?

Solar generation could contribute 8.1% of residential demand or 26.8% to non-residential demand in 2030. Approximately 784.13 thousand GW of solar energy could be contributed by 2030. As island communities are the main targets of solar off-grid systems, the visionary scenario could help Ghana attain the 100% electrification rate by the 2030 target.

Is solar energy a sustainable economic growth strategy for Ghana?

As Ghana prioritized energy in its Intentionally nationally determined contributions (INDCs) with a target of 100% electricity access by 2030, an increase in solar energy generation can also aid in the earlier achievement of this target. The framing of solar energy deployment as a strategy for sustainable economic growth is strongly recommended.

What are the issues affecting the implementation of solar energy in Ghana?

Energy policy is at the heart of the issues affecting the implementation of solar energy in Ghana. Others include solar energy usage in power generation as well as heating and cooling purposes, technical feasibility, equipment supply, and manufacture, as well as financing. Fig. 6. Key considerations for solar implementation .

Can solar energy achieve universal access to electricity in Ghana?

The objective of this study is to investigate the potential contribution of solar energy in achieving universal access to electricity in Ghana by 2030. The study further assesses the CO<sub>2</sub> emission reductions that could result from the deployment of solar energy projects towards achieving universal access to electricity.
