Albania builds solar power generation system

Overview

Albania is advancing its renewable energy ambitions with a planned 50 MW solar park in the Fushë-Krujë area, a project propelled by an EU grant from the Western Balkans Investment Framework (WBIF). Does Albania have solar power?

Solar power accounts for 6% of electricity production in Albania. More than half of the photovoltaic output is from the Karavasta facility, the biggest of its kind in the Western Balkans. It has 140 MW in peak capacity. France-based Voltalia won a long-term power purchase agreement for the project by winning a state-sponsored auction in 2020.

Will a 100 MW solar power plant be built in Albania?

A company called Euron Solar-PV has submitted an application to the Albanian Ministry of Infrastructure and Energy for the construction of a 100 MW Solar power plant in the villages of Fushe and Povelce, near Fier City. The project is currently in its initial stages and the public has two weeks to submit comments and objections.

How many solar projects are there in Albania?

Albania's Ministry of Infrastructure and Energy has received four applications for solar projects with a total installed capacity of 235 MW. The projects are planned to be built in the country's photovoltaic hub Fier region, the largest of which will be the second largest solar facility in Albania.

What is the largest solar power plant in Albania?

In late 2023 the 140MW Karavasta solar power plant was completed, having taken Voltalia of France 15 months to build, it is the largest in Albania to date. A 100 MW solar power project called Spitalla in Durrës area is planned to be built next. Albania has enormous potential for electric energy from wind power.
