American cities that support new energy storage

Overview

Which states have installed utility-scale storage in the United States?

The installation of utility-scale storage in the United States has primarily been concentrated in California and Texas due to supportive state policies and significant solar and wind capacity that the storage resources will support. By Q3 2024, Texas had installed 2,283 MWh of storage capacity, while California had installed 5,992 MWh of capacity.

Where are the best places for green energy?

If we look at our top 35 cities identified as the best places for green energy, in terms of U.S. regions and divisions (as designated by the Census Bureau), very distinct patterns emerge. The most obvious is the dominance of the U.S. West region, which is home to 29 out of the top 35 clean energy cities.

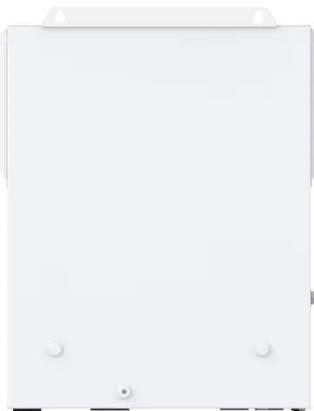

Why are energy storage resources important?

Energy storage resources have become an increasingly important component of the energy mix as traditional fossil fuel baseload energy resources transition to renewable energy sources. Currently 23 states, plus the District of Columbia and Puerto Rico, have 100% clean energy goals in place.

Does New York have a bulk energy storage program?

The New York State Energy Research and Development Authority filed with the New York Public Service Commission a proposed bulk energy storage program implementation plan designed to support the state's build-out of storage deployments to meet the stated goal and to reduce projected costs by nearly \$2 billion.
