What arc flash mitigation solutions are available?

Improve safety with our extensive portfolio of arc flash mitigation solutions including arc quenching and arc-resistant switchgear, Power Xpert XGIS switchgear, Power Xpert Dashboard, Power Defense molded case circuit breaker, Insulgard, arc flash relays and more.

What is arc quenching Magnum DS switchgear?

The arc quenching Magnum DS switchgear detects and extinguishes an arc flash in less than 4 ms to dramatically reduce incident energy. It reacts 10x faster than systems that rely solely on circuit breakers to clear an arc fault, including maintenance switches, ZSI, bus differential relaying and arc detection relays.

How do I reduce arc flash hazard?

Changing the system operating configuration (switching to an alternate feeder or engaging maintenance mode settings) may reduce the arc flash hazard. Enables personnel to stand outside the arc-flash protection boundary when inserting or removing (racking) power breakers or MCC units from low- or medium-voltage equipment.

Can a relay and breaker be used to clear an arc flash?

Relay and breaker settings can often be optimized to trip quickly to clear an arc flash event but also maintain coordination. When coordination cannot be maintained to achieve desired arc flash results, a maintenance switch can be added.
