

EQACC SOLAR

Are inverters and batteries a good match

Overview

Pairing a battery with your inverter in 2025 requires careful consideration of energy needs, inverter compatibility, battery chemistry, and smart management tools. Does a solar inverter need a battery?

Solar energy systems without batteries send excess power to the grid. When you add a battery, you want to store that excess energy for later use, during nighttime or power outages. But not all inverters can manage both solar power generation and battery charging/discharging.

Can a battery inverter work with a lithium ion battery?

Not all inverters are designed to work with every type of battery, so it is crucial to ensure that the specifications align. For instance, lithium-ion batteries require specific inverters that can handle their unique charging and discharging characteristics, while lead-acid batteries may have different requirements.

Can a hybrid inverter work without a battery?

Most hybrid inverters can operate without a battery and function like a grid-tie solar inverter by exporting excess solar energy to the electricity grid. Solar energy systems without batteries send excess power to the grid. When you add a battery, you want to store that excess energy for later use, during nighttime or power outages.

Are all solar inverters compatible?

But not all inverters can manage both solar power generation and battery charging/discharging. If your current inverter isn't compatible, you might need to replace it or add additional components, which can increase the overall system cost and complexity.
