# Asia s new solar panels

## Overview

---

What's new in the 2025 Southeast Asia Solar supply chain map?

The first 2025 edition of the Southeast Asia Solar Supply Chain Map includes significant revisions and additions, driven by valuable market feedback and the region's evolving geopolitical and industrial dynamics.

Why are Chinese solar companies moving to Southeast Asia?

Ever since finding themselves in the crosshairs of US import tariffs in 2012, Chinese solar manufacturers began shifting their production to Southeast Asia to circumvent trade barriers. More recently, overcapacity and brutal price wars in China's domestic market have accelerated these international relocations.

Why is Southeast Asia accelerating solar energy plans?

SINGAPORE (Reuters) – Southeast Asia is accelerating plans to harness energy from the sun in coming years as the cost of generating electricity from some solar power projects has become more affordable than gas-fired plants, officials and analysts said.

How much solar power will Southeast Asia have in 2024?

Southeast Asia's cumulative solar photovoltaic (PV) capacity could nearly triple to 35.8 gigawatt (GW) in 2024 from an estimated 12.6 GW this year, consultancy Wood Mackenzie says.
