

Asia solar container communication station inverter signal

Overview

Are Chinese solar power inverters connected to critical infrastructure grids?

U.S. energy officials have launched an investigation after discovering unauthorized communication equipment embedded within Chinese-manufactured solar power inverters connected to critical infrastructure grids across the country.

Are Chinese inverters a threat to solar power?

This vulnerability is especially dangerous given the growing penetration of solar power on Western grids, where in some regions, Chinese-manufactured inverters control upwards of 200 gigawatts of generating capacity – equivalent to more than 200 nuclear power plants.

Are hidden radios in Chinese-manufactured inverters a threat?

Hidden radios in Chinese-manufactured inverters expose a real supply-chain vulnerability that could undermine grid stability and corporate reputation. Maya Security specializes in operational-technology resilience assessments, uncovering undisclosed hardware risks before they become emergencies.

Do solar inverters contain undocumented cellular radio devices?

These inverters, which are essential components that convert direct current from solar panels into alternating current usable by the electrical grid, were found to contain undocumented cellular radio devices not disclosed in product specifications or technical documentation.
