Attic solar lighting glass

Overview

What is a solar attic fan?

A solar attic fan is a roof-mounted ventilation fan powered entirely by the sun. It actively pulls hot air out of your attic, reducing heat buildup and moisture using free solar energy (no wiring or electricity required). Key benefits: Solar attic fans can lower attic temperatures by 20–50°F, easing the load on your A/C.

How much does a solar attic fan cost?

This can translate to up to 30%–40% cooling cost savings in hot climates, while also extending your roof's lifespan and preventing issues like mold and ice dams. Costs & ROI: Quality solar attic fan units cost around \$300–\$600, plus ~\$100–\$300 for professional installation (if you don't DIY). Typical installed cost is ~\$600–\$800.

What are the different types of solar attic fans?

Types of solar attic fans: Most residential solar attic fans are roof-mounted units – they resemble a low-profile dome or pyramid on your roof with a solar panel on top. There are also gable-mounted solar fans, which can attach behind an existing gable vent (with a separate solar panel that you mount on the roof nearby and wire to the fan).

Should I install an airtight attic floor & solar fan?

An airtight attic floor + solar fan is an awesome combo for efficiency; a leaky attic floor + fan could have mixed results. So, don't skip the prep work: seal, insulate, then ventilate. ● Using Existing Vent vs. Cutting a New Hole: How you physically install the fan depends on your roof's situation.
