Overview

Is a low-cost irrigation system suitable for tomato and melon crops?

Agricultural water consumption, constituting 70–80 % of global water usage, faces critical challenges due to climate change, diminishing rainfall, and a burgeoning population. This research presents the development and implementation of a low-cost automatic smart irrigation system for tomato and melon crops in the Tuscany region, Italy.

Can smart irrigation systems contribute to more sustainable water use in agriculture?

Conclusion This study demonstrates how the adoption of a smart irrigation system based on evapotranspiration models can contribute to more sustainable water use in agriculture.

Is a solar-powered smart irrigation system based on a low-cost wireless network feasible?

Bouzguenda et al. , which describes a solar-powered smart irrigation system based on a low-cost wireless network, focuses more on technical feasibility with limited comparative economic analysis, only providing an estimated cost for the proposed system.

What is smart irrigation?

Smart irrigation is a technique that is countering this problem efficiently by providing efficient and sustainable water use . This type of irrigation system includes data acquisition by a wide range of sensors, irrigation control, wireless communication, data processing and fault detection.

Automatic Mobile Energy Storage Container for Italian Agricultural

Mobile systems for the agricultural irrigation , MECCANICA ...

The Italian company operating in the agricultural irrigation field since 1906 produces excellent mobile systems for agricultural irrigation. For more than 100 years, Meccanica Cremonini ...
