

**EQACC SOLAR**

# **BMS battery failure mode**

## Overview

---

What is battery management system (BMS)?

The battery management system BMS (Battery Management System) is responsible for controlling the charging and discharging of the battery and implementing functions such as battery state estimation and is closely related to the battery and the vehicle system.

Why do battery management systems fail?

In numerous instances, the Battery Management System (BMS) proved incapable of averting or handling these circumstances, resulting in battery failure. Another prevalent factor pertains to flaws in the design and manufacturing of the battery.

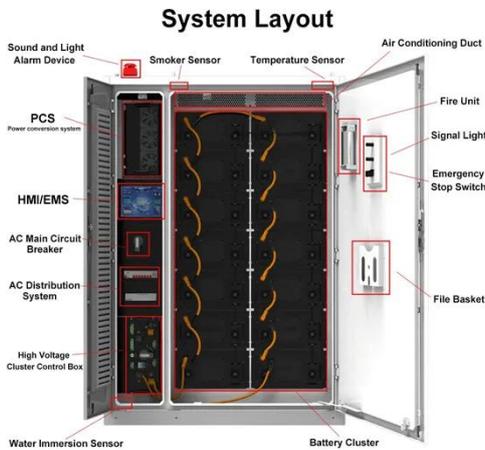

What is a BMS failure?

When discussing BMS failures, we are typically addressing instances in which the BMS fails to adequately execute its primary functions, resulting in problems like battery overcharging or undercharging, suboptimal performance, or, in the most severe cases, device malfunction and battery failure.

Can a faulty battery management system cause a fire?

A faulty BMS can lead to battery failure, safety hazards, or even fires. This guide provides step-by-step testing methods, common failure signs, and expert-backed solutions to verify your BMS's health—whether you're an EV enthusiast, solar energy user, or DIY battery builder. A BMS performs several key functions:
