

**EQACC SOLAR**

# Battery cabinet automation

## Overview

---

What is PC-based battery control?

Our control technology enables end-to-end automation of all processes in battery manufacturing: from electrode production to module and pack assembly. PC-based control offers advantages for all machine types, no matter whether you produce round, pouch, or prismatic battery cells.

Why are battery machine builders turning to automation?

With the demand for battery solutions driven by global green energy trends outstripping machine supply, strong competition is necessitating smarter approaches to battery machine design. Battery machine builders are turning to automation to stay ahead of the curve.

How can a PC-based automation platform improve battery cell winding efficiency?

Our approach involves the use of a central PC-based automation platform to achieve maximum process efficiency in battery cell winding, as this allows vision systems, motion tasks, and communication to I/Os to all be controlled with a high level of synchronicity. It also enables precise winding accuracy while maintaining high output.

Why is e-mobility automation so important?

The fast-growing e-mobility market places high demands on battery cell production in terms of speed and efficiency. This is why intelligent, high-performance automation solutions are so essential. Our control technology enables end-to-end automation of all processes in battery manufacturing: from electrode production to module and pack assembly.

## Battery cabinet automation

---

### **Solutions for battery assembly , ABB**

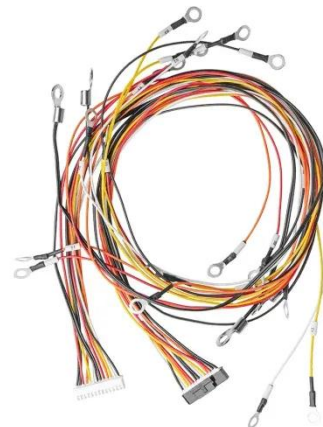

ABB Robotics leads in automation for the electric vehicle industry, delivering robotic solutions that make battery cell, module, and tray production faster, safer, and more precise. ...
