# Battery cabinet in information room

## Overview

---

How to choose a battery system for a data center?

Stationary lead-acid batteries are the most widely used method of energy reserve for information technology rooms (data centers, network rooms). Selecting and sizing ventilation for battery systems must balance and trade off many variables. These could include different battery technologies, installation methods, operating modes, and failure modes.

What are Arimon battery cabinets?

Arimon uninterruptible power supply (UPS) backup battery cabinets are available for either front access batteries or top terminal (monobloc) batteries. All battery cabinets are constructed from heavy gauge steel with a durable welded frame and acid resistant powder coated finish available in a wide range of colors.

What is a CIBR battery rack?

Charles Indoor Battery Racks (CIBR) are modular, seismic Zone 4 rated (GR-487 certified) battery rack systems designed to fit the footprint of VRLA batteries from a variety of battery manufacturers or Saft Tel.X Ni-Cd batteries. In addition to several standard configurations, there are also single tray options that can be built on site.

Can a battery be installed in the same room?

The International Fire Code 2 states “Batteries shall be permitted in the same room as the equipment that they support.” Special fire or explosion-proof equipment should not be required. Because they continuously vent hydrogen gas, vented batteries are usually installed in dedicated battery rooms.
