# Battery cabinet wake-up power does not respond

## Overview

---

Why does my Dell Computer not wake up from sleep?

This article covers troubleshooting steps to resolve issues with Dell computers that do not wake up from sleep, hibernate, or suspend mode. Generally this is the result of an incorrect Power State setting in the BIOS and Windows, or it could be a corrupted driver. The following troubleshooting steps should be done in a Top to Down order.

Why is my computer not waking up from sleep mode?

Hibernation is another power-saving mode in our Windows but it's also known to interfere with the sleep mode and cause the computer will not wake up from sleep mode in Windows 10 or 11 problem. So we can try to disable and enable the feature to see if it fixes the issue. Here's how: On your keyboard, press the Windows logo key and type cmd.

What happens if a computer wakes up on its own?

Unexpected wakeups: The computer wakes up on its own without any input.  
Battery drains in sleep mode: The device consumes power significantly while in sleep mode.  
Black screen on wake: The display remains unresponsive after waking from sleep or hibernate mode.

Can you wake up a lithium battery?

For voltages under 2V per cell, you should not attempt to wake up the battery, as it may be unsafe or permanently damaged. Always use a dedicated lithium charger for accurate voltage detection and safe charging. Many modern li-ion chargers feature a boost or recovery mode designed to safely wake up lithium battery packs from deep discharge.
