

EQACC SOLAR

Battery to DC Uninterruptible Power Supply

Overview

What is a DC uninterruptible power supply?

This power supply is supplied by mains voltage and contains an integrated DC uninterruptible power supply feed by an external battery. It is designed to supply the applied load continuously and without interruption, even when the mains power fails.

How to choose a power supply for a DC application?

Select the appropriate power supply, uninterruptible power supply, and battery module for your application. Furthermore, our UPS modules with integrated power supply or integrated battery module offer a space-saving UPS solution. Our uninterruptible power supplies for DC applications provide reliable protection against supply interruptions.

How does an uninterruptible power supply work?

The uninterruptible power supplies have e.g. an adjustable maximum buffer time to protect the battery and the unit protects the battery from going into a deep discharge. Draining the battery all the way down can damage it in a very short period of time, especially if this occurs multiple times.

Are IPOWER DC UPS silent?

The iPower DC UPS are silent in operation. There are no audible alarms or cooling fans. The iPower-H is an AC/DC plug in unit that replaces the existing “wall wart” power supply thereby taking up no extra installation space. The single 3350mAh battery provides up to an hour back up for low powered routers operating from 12Vdc.

Battery to DC Uninterruptible Power Supply

DC UPS , Battery Backed DC Power Supply , 12Vdc, 24Vdc

Our range of DC UPS (Uninterruptible Power Supply) solutions are designed to safeguard critical electronic systems from power disruptions. Our DC UPS devices ensure a continuous and ...
