

EQACC SOLAR

Berlin DC Uninterruptible Power Supply

Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible power supplies (UPS) protect the 24 V supply voltage against unexpected power failures. In the BLOCK portfolio, capacitive UPS solutions provide 24 V DC power supply for up to several minutes. Equipped with ultracapacitors, these solutions are designed for long service life and operation in demanding temperature ranges.

How to choose the right uninterruptible power supply?

As a result, the demands made on uninterruptible power supplies are high. When choosing the right uninterruptible power supply, particular attention should therefore be paid to longevity, energy efficiency and reliability.

What is an uninterruptible combined UPS system?

The uninterruptible combined UPS units include an economical 24 V DC switched mode power supply with an integrated charge and control unit for optimal battery management. These space-saving combined UPS systems control and monitor the connected battery modules, providing early warnings when battery life expectancy is low.

What are the benefits of a decentralised UPS system?

Maintenance-free Supercaps, long-life and safe LiFePo4 and lithium-ion battery packs or classic lead-acid batteries go into action. Our decentralised UPS systems provide effective protection against power failure, flicker, fluctuation or voltage drops in DC power supplies.

Berlin DC Uninterruptible Power Supply

DC UPS, DC uninterruptible power supply

The uninterruptible power supply PowerCompact Combi features an economic DC 24 V switched mode power supply with basic requirements, tailored for the supply of industrial PCs and a ...
