# **Bibli-directional charging of smart photovoltaic energy storage containers for base stations**

## Overview

---

What is a photovoltaic-energy storage-integrated charging station (PV-es-I CS)?

As shown in Fig. 1, a photovoltaic-energy storage-integrated charging station (PV-ES-I CS) is a novel component of renewable energy charging infrastructure that combines distributed PV, battery energy storage systems, and EV charging systems.

Can photovoltaic-energy storage-integrated charging stations improve green and low-carbon energy supply?

The results provide a reference for policymakers and charging facility operators. In this study, an evaluation framework for retrofitting traditional electric vehicle charging stations (EVCSs) into photovoltaic-energy storage-integrated charging stations (PV-ES-I CSs) to improve green and low-carbon energy supply systems is proposed.

Can unidirectional and bidirectional charging be integrated into a hybrid energy storage system?

In the case of bidirectional charging, EVs can even function as mobile, flexible storage systems that can be integrated into the grid. This paper introduces a novel testing environment that integrates unidirectional and bidirectional charging infrastructures into an existing hybrid energy storage system.

Can a multi-energy smart charging station adapt to the future power grid?

To this end, this article proposes a multi-energy complementary smart charging station that adapts to the future power grid. It combines photovoltaic, energy storage and charging stations, and uses energy storage systems to cut peaks and fill valleys to effectively balance the load fluctuations of charging stations.
