

**EQACC SOLAR**

# **Bidirectional charging of marine energy storage containers**

## Overview

---

V2X (Vehicle/Vessel-to-Everything) is the overarching term for using bi-directional charging technology to transfer the energy stored by electric vessel batteries to the grid, buildings, or load. Can offshore charging contribute to the decarbonization of the maritime industry?

Furthermore, integrating offshore charging with renewable energy sources, such as floating wind turbines, could lead to a sustainable energy loop, where ships are continuously powered by clean energy, contributing to the decarbonization of the maritime industry. 6. Conclusion.

What is containerized energy storage?

ABB's containerized energy storage solution is a complete, self-contained battery solution for a large-scale marine energy storage. The batteries and all control, interface, and auxiliary equipment are delivered in a single shipping container for simple installation on board any vessel. How does containerized energy storage work?

.

Can battery energy revolutionize maritime transportation?

Supportive policies, investments in charging infrastructure, and continued research into next-generation batteries are essential to overcoming existing challenges. By addressing these factors, battery energy has the potential to revolutionize maritime transportation, paving the way for a cleaner, more efficient, and sustainable shipping industry.

How does a maritime energy storage system work?

The maritime energy storage system stores energy when demand is low, and delivers it back when demand increases, enhancing the performance of the vessel's power plant. The flow of energy is controlled by ABB's dynamic Energy Storage Control System.
