

**EQACC SOLAR**

# **Bms solar container lithium battery price**

## Overview

---

In 2025, the typical cost of commercial lithium battery energy storage systems, including the battery, battery management system (BMS), inverter (PCS), and installation, ranges from \$280 to \$580 per kWh. Do lithium ion batteries need a BMS?

Lithium-ion batteries differ from lead-acid batteries in that they require a BMS\* for high-accuracy monitoring of battery voltage, charge-discharge current, temperature, etc. To prevent battery depletion, a reduction in standby current is indispensable. ABLIC provides a host of products that are ideal as ICs in a BMS.

How much does a commercial lithium battery energy storage system cost?

In 2025, the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region depending on economic levels.

How much does a battery storage system cost?

The cost of the BMS can account for about 5% to 10% of the total battery storage system cost. For a 2MW system, if we assume a BMS cost ratio of 8%, and the total system cost excluding the BMS is \$800,000 (as calculated for the battery cost above), then the cost of the BMS would be  $\$800,000 \times 0.08 = \$64,000$ .

How much does a battery management system cost?

Here are 6 of the leading global manufacturers serving both consumer and industrial lithium battery markets: Ewert Energy Systems – One of the earliest BMS providers (since 2008), Ewert focuses exclusively on high-end custom BMS design, especially for large-scale battery storage systems. Typical price range: \$3,000-\$10,000.
