

**EQACC SOLAR**

# **Build an energy storage pack battery factory**

## Overview

---

What is a stationary battery energy storage system?

Stationary battery energy storage systems (BESS) are showing a lot of promise, and as technology grows within the electric vehicle market, application development specialists are rapidly adapting that technology as a storage solution. Stacked battery packs of various sizes and configurations are connected to form large assemblies.

What makes a good battery pack?

Designing a reliable, safe and efficient battery pack isn't just about selecting the right cells or managing heat, it's about integrating every subsystem into a cohesive, validated system.

What is a stacked battery pack?

Stacked battery packs of various sizes and configurations are connected to form large assemblies. These assemblies are housed in a structure comprised of a roof, floor and sidewalls that are designed to resist extreme environmental conditions while allowing access for service and maintenance.

What is DuPont battery pack assembly & thermal management?

DuPont has a wide portfolio of battery pack assembly and thermal management solutions that have been validated and specified with EV and lithium-ion battery manufacturers around the world. These solutions easily translate to stacked battery packs for energy storage systems of all sizes, configurations, and end uses.
