# **Cambodia emergency energy storage power supply price**

## Overview

---

What is Cambodia's electricity supply?

The composition of Cambodia's electricity supply is a blend of domestic production and international imports. In 2022, over 25% of the country's energy was imported from Thailand, Laos and Vietnam. Due to the country's high reliance on hydropower, power demand typically outstrips domestic supply during the dry season.

Why is Cambodia's energy security so important?

Cambodia's electricity grid is ageing and cannot meet the country's rapidly growing energy demands. As a result, the country's electricity prices are some of the highest in the region, and its infrastructure suffers from quality issues. Tackling these challenges is a core component of the country's long-term energy security.

How can Cambodia reduce its electricity demand & supply gap?

First, Cambodia's existing electricity demand and supply gap need to shrink. One of the main ways the country can achieve this is to reduce the rapidly increasing demand for energy. The country's National Energy Efficiency Policy 2022-2030 aims to decrease Cambodia's final electricity consumption by 19% in 2030.

Why is electricity a key component of Cambodia's long-term energy security?

Tackling these challenges is a core component of the country's long-term energy security. Electricity in Cambodia is at a crucial juncture as the nation aims to increase electrification rates and modernise its grid within the regional energy landscape.
