# Can I install energy storage while installing solars

## Overview

---

Should you install a battery storage system with your solar panel installation?

By integrating a battery storage system with your solar panel installation, you can effectively create a self-sufficient, off-grid power supply that reduces reliance on the main electrical grid. The Tesla Powerwall, in particular, has revolutionized the residential and commercial solar energy storage market.

Do solar panels need storage?

To maximize the benefits of solar power and ensure a reliable energy supply, storage solutions are essential. Without storage, excess solar energy generated during peak sunlight hours goes unused, while energy demands during night time or overcast days cannot be met by solar panels alone.

How do I store solar power for later use?

To store solar power for later use, you'll need to integrate a separate energy storage system, such as battery banks or grid-tied systems with net metering. Evaluate your energy needs and consumption patterns to determine the appropriate storage capacity and types of solar panels for your specific application.

Should your business consider solar energy storage?

For businesses considering solar energy storage, it's essential to evaluate whether battery storage makes financial and practical sense based on your unique energy usage patterns, costs, and available incentives. Start by analyzing your electricity consumption, including peak demand times and the potential for load shifting.

### Solar Integration: Solar Energy and Storage Basics

Storage helps solar contribute to the electricity supply even when the sun isn't shining by releasing the energy when it's needed.

 Energy can also be stored by changing how we use the devices we already have. For example, by heating or cooling a building before an anticipated peak of electrical demand, the building can "store" that thermal energy so it doesn't need to consume electricity later in the day. The building itself is acting as a thermos by storing cool or warm air. See more on [energy.gov/TI](http://energy.gov/TI) [PDF]
