# **Canadian Flow Battery Planning**

## Overview

---

What is the Canadian battery Innovation Roadmap?

The Canadian Battery Innovation Roadmap from the Accelerate alliance is “a strategy to establish Canada as a global leader in battery technology by 2035” Accelerate’s new report, titled the “Canadian Battery Innovation Roadmap,” presents an analysis of Canada’s battery ecosystem and makes recommendations for actions to increase competitiveness.

How can Canada become a global leader in battery technology?

This roadmap envisions Canada as a global leader in clean, innovative battery technology and a hub for sustainable battery production in North America by 2035. Achieving this vision requires addressing key challenges and leveraging Canada’s strengths through a coordinated, strategic approach involving government, industry, and academia.

Can a flow battery save energy?

Flow battery advocates say their water-based technology needs a fraction of the metals used in lithium batteries and can store energy longer and without fire risk. But high costs could limit its role in renewable energy storage.

What is Canada's battery Innovation Program?

This project, funded through Natural Resources Canada’s Energy Innovation Program, will also enable Canada’s battery innovators, including stakeholders across industry, academia and government, to advance their priorities for a sustainable battery ecosystem while cementing Canadian battery innovation leadership in the global marketplace.
