# **Capacity of small energy storage power stations**

## Overview

---

Why are small and medium-sized pumped storage power stations important?

Small and medium-sized pumped storage power stations have unique development advantages, and the development and construction of small and medium-sized pumped storage power stations have important practical significance for optimizing the energy structure of Zhejiang Province.

Should pumped storage power stations be planned according to local conditions?

In 2021, the National Energy Administration made it clear in the Medium and Long Term Development Plan for Pumped Storage (2021–2035) that the construction of small and medium-sized pumped storage power stations should be planned according to local conditions in provinces with better resources.

How many pumped storage power stations are there in China?

At present, five pumped storage power stations such as Xikou, Tianhuangping and Tongbai have been successfully put into operation, with a total installed capacity of 6.68 million kilowatts.

How pumped storage power station can reduce the cost?

Therefore, on the basis of conventional small hydropower, the transformation into a small pumped storage power station or joint operation with pumped storage can reduce the cost, shorten the construction period, solve the problem of site selection, improve the power station output in the dry season, and increase the economic benefits.

## Capacity of small energy storage power stations

---

### Analysis on the Development Prospect of small and ...

Abstract. Small and medium-sized pumped storage power stations have the advantages of short construction period, fast action, relatively low requirements for ...
