Central Asia Energy Storage Product Domestic Requirements

Overview

How has Central Asia impacted China's Energy Security Strategy?

China's energy security strategy has also greatly benefited from its investments in Central Asia. The China-Central Asia Gas Pipeline has significantly reduced China's reliance on maritime energy imports, which are vulnerable to geopolitical disruptions, such as those that could arise in the South China Sea or the Strait of Malacca.

How many electrochemical storage stations are there in China?

In terms of developments in China, 19 members of the National Power Safety Production Committee operated a total of 472 electrochemical storage stations as of the end of 2022, with a total stored energy of 14.1GWh, a year-on-year increase of 127%.

How big is China's energy storage capacity?

According to CNESA data, the capacity of independent energy storage stations planned or under construction in China in the first half of 2022 was 45.3GW, accounting for over 80% of all new energy storage projects planned or under construction.

How many electrochemical storage stations are there in 2022?

In 2022, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4).
