Circuit breaker in substation in Oman

Overview

What is the Oman earthing system?

The Oman earthing system differs from those defined in IEC 60364 and also used by BS 7671. The Oman system includes the following characteristics: The distribution system is directly connected to earth at the neutral point of the supply transformer.

What is a miniature circuit breaker?

Miniature circuit-breakers (MCBs) (which are essentially devices for the protection of sub-circuits) shall comply with BS EN 60898 having a short-circuit capacity of 10 kA. Circuit-breaker terminals shall be fitted with contacts having adequate and durable facings of silver or materials not subject to progressive deterioration.

What are the requirements for a miniature circuit breaker (MCB)?

Single phase and three phase miniature circuit-breaker (MCB) distribution boards for ratings not exceeding 200 A per phase for incoming circuit and 100 A for individual outgoing circuits shall be factory built assemblies complying with BS EN 61439. An integral isolator shall be included for isolating incoming supply.

Which circuit breaker is required for pool lights & escalators?

All circuits feeding pool lights and other components shall be protected by an RCD having a trip rating of 10 mA in compliance with Section 12.1 installed on the supply side of L.V. transformer. Each elevator or escalator shall be protected by a separate circuit-breaker on the main switch board.
