TRIANGLE FLAT ROOF SYATEM

Overview

How to color a solar panel?

It may require mass colored glass, i.e. flat glass with low iron content used to optimize the transmission of light, as in the case of the red, green or orange photovoltaic created by FuturaSun. Or you can use digital printing on ceramic or silk printing to color the front glass of your solar panels.

What color solar panels are available?

From full black to snow white – variety of solar panel color options is where Metsolar stands out. We are an EU manufacturer of Building Integrated Photovoltaic (BIPV) solar panels for commercial and residential buildings.

Why do solar panels come in different colours?

The innovations in high-quality ceramic colour techniques in the Solarix colours ensure that the solar panels match perfectly with other materials in construction, such as stone, composite, wood and aluminium. Solarix has developed this technology specifically for solar panels through materialization of the colours.

Are coloured solar panels a good choice?

And our coloured solar panels can significantly prevent those emissions. In addition to colourful solar panels, Solarix offers various variants of white, black and grey-tinted solar panels. White is a highly sought-after colour for facade panels in building design, because it gives a fresh and bright appearance.
