# **Comparison of Economic Benefits of Fixed Solar-Powered Containerized Systems in Shopping Malls**

## Overview

---

Energy systems for flexibility in buildings are hybrid, primarily including rooftop photovoltaics (PV), cooling storage, and battery. Considering their techno-economic patterns, this research establishes an.

Why should shopping mall owners consider solar panels?

In South Africa, a further driver is the current and continued constraints of the electricity supply system. One of the most compelling reasons for shopping mall owners to consider solar panels is the potential for significant cost savings.

Why do South Africa's shopping malls use solar panels?

In South Africa, where much of the power produced is from fossil fuels, installing solar panels and going green promoted an eco-friendly business. Solar panels guarantee free electricity for up to 25 years if well maintained. By transitioning to solar energy, shopping malls play a pivotal role in reducing the city's carbon footprint.

Do malls need solar power?

The analysis indicates that the mismatch between the electricity consumption of malls and PV is consistent in various regions, ranging from 43% to 50%. Accordingly, the optimal solar penetration for malls in most cities is 40%, with energy storage installed.

Does solar energy storage improve economic performance?

The overall economic performance of energy storage improves with the incorporation of PV, while the optimal cooling storage rate decreases. The rightmost three panels in Fig. 7 (c) illustrate the cost savings for three scenarios: installing PV alone, PV with cooling storage, and PV with a 0.006 \$/(a·kWh e) energy storage investment cost.
