# **Current Status of 5G Base Stations in Denmark**

## Overview

---

Is 5G available in Denmark?

Helped by the highest urbanisation rate, smallest rural population and flattest terrain among the Nordic countries, Denmark's four operators have collectively achieved 5G Availability of at least 70% in each of the country's regions (regioner), despite lower-than-average ARPU, according to Speedtest Intelligence data for Q4 2024.

What is the European 5G Observatory?

The European 5G Observatory tracks progress in 5G infrastructure deployment across the EU and other regions worldwide according to base stations deployment, edge nodes and infrastructure sharing agreements. Source: IDATE estimates and regulators' data. Reporting period: at December 2024. Source: IDATE estimates and regulators' data.

Which country has the highest 5G availability in Europe?

Denmark retained its position as Europe's leader, achieving an impressive 5G Availability of 83.4%, narrowly surpassing Switzerland, which remains the only other European country to exceed the 80% milestone to date. Spectrum configuration decisions are a critical pillar of mobile network design and play a direct role in shaping coverage outcomes.

Are Nordic operators celebrating 5G availability?

Analysis of Speedtest Intelligence ® data confirms that Nordic operators have much to celebrate. In Q4 2024, Nordic countries claimed three of the top five positions in Europe for 5G Availability—the percentage of users with 5G-capable devices spending most of their time connected to 5G networks.
