

**EQACC SOLAR**

# **DC screen inverter installation**

## Overview

---

How do I install a DC inverter?

Personal protective equipment (PPE) must be worn on-site. Follow electrical safety standards for installations. Electrically isolate DC input and AC output before operation. Use overcurrent protection devices (OCPD). Install inverter per manual instructions. Ensure DC input voltage within limits. Store inverters in a clean, dry place.

How do I connect an inverter to my home electrical system?

To integrate the inverter with your home electrical system: Turn Off the Main Power Supply: Ensure safety by cutting off the main power supply before making any connections. Connect to the AC Distribution Box: Use appropriate cables to connect the inverter to the home's AC distribution box, following the wiring diagram.

Why do LCD screens need an inverter?

Inverters are essential for an LCD screen as they convert DC (Direct Current) from the power supply to AC (Alternating Current), enabling the backlight to function. Without an inverter, the screen would remain dim and unusable because the backlight is what makes the display visible.

How to install a wireless inverter?

Install the inverter at least 30m far away from the wireless equipment. Add a low pass EMI filter or a multi winding ferrite core to the DC input cable or AC output cable of the inverter. Warning labels on the inverter are as follows. HIGH VOLTAGE HAZARD. Disconnect all incoming power and turn of the product before working on it. Delayed discharge.
