

EQACC SOLAR

Dakar off-grid solar power generation system

Overview

Does Senegal have a solar energy sector?

Senegal's energy sector is increasingly reliant on solar power, making it essential to assess its long-term viability under changing climate conditions. This study evaluates future solar energy production in Senegal up to 2050, focusing on eight operational solar plants: Bokhol, Sakal, Malicounda, Kahone, Ten Merina, Mekhe, Ndiass, and Kael.

Which solar companies operate in Senegal?

3.2%. Attracted by the stable political environment, several notable local and international solar PV companies like Oolu Solar and Baobab+ operate in Senegal, using cash sales, pay-as-you-go (PAYGo), and partnerships with micro-finance institutions.

Do solar power plants in Senegal vary over time?

They found that Senegal experiences significant variability in solar resources over time and across different locations, depending on the year and specific site conditions. Niang et al. (2023) evaluated the seasonal performance of six solar power plants in Senegal, namely Bokhol, Sakal, Malicounda, Kahone, Ten Merina, and Mekhe.

Is there a bias correction for solar energy production in Senegal?

Despite the higher resolution and detailed regional climate information provided by the CORDEX-CORE datasets, biases are noticed. These results suggest a bias correction to better estimate the future changes in solar energy production in Senegal. A bias correction is performed using the method described in Eq. 5 (Fig. 4b).
