Overview

What is a DC-AC inverter?

This high efficiency DC-AC inverter converts 12 Volts DC to 600 Watts of pure sine-wave AC power at 120 Volts, 60 Hz. Features include built-in electronic GFCI, overload protection, low battery alarm / shut down, low idle power draw. AC power is available from a NEMA-20R GFCI duplex outlet on the front panel. Safety certified to UL standards.

What is a DC to AC inverter?

DC to AC inverters are devices that convert a DC (direct current) power supply into an AC (alternating current). It is well known that DC is a relatively stable and positive voltage source, while AC oscillates around a nominal 0V level, usually in a square or sinusoidal waveform.

What is a DC to AC converter?

With our DC to AC converters, you can easily charge your batteries in your vehicles. This type of circuit is commonly used in solar power systems to drive low-power AC motors. DC-to-AC converters are used for transferring electrical power from dc transmission lines to loads.

How is the type of converter determined in a DC-AC inverter system?

The type of converter is determined according to the position of the resonant network concerning the load, three-phase inverter, and DC-link in the DC-AC inverter systems. The characteristics of the switching device waveforms (ZVS or ZCS) depend on the types of achieved resonant condition (parallel or series).
