# **Difference between using an inverter to charge a 140AH battery**

## Overview

---

What is the difference between a battery charger and an inverter?

Its primary role is to manage the charging process efficiently to maintain the battery's optimal performance, the battery charger internally converts AC power into DC power for the battery. On the other hand, an inverter for battery charger operates with a broader scope.

How to use a battery charger with an inverter?

The first step is to connect the battery charger to the inverter, establishing a link that facilitates the flow of power, the second step would be to connect the battery to the charger and turn on charging. When using the inverter for battery charger, the sine wave pattern of the inverter's output is a crucial consideration.

What is an inverter charger?

An inverter charger is a hybrid device that combines two critical functions in one unit: Inverting: Converts DC power from batteries (e.g., 12V/24V/48V) to AC power (120V/240V) for household appliances. Charging: Converts AC power from the grid or a generator back to DC to recharge your batteries—automatically and efficiently.

Can a 12V battery charger be powered by an inverter?

Yes, a 12v battery charger can indeed be powered by an inverter, and need to be sure to use a 12v inverter of the same voltage. However, it's essential to ensure that the inverter's capacity aligns with or exceeds the power requirements of the charger for optimal efficiency. ② Will batteries charge if the inverter is off?
