

## EQACC SOLAR

# Distributed power generation of national general solar container communication stations

## Overview

---

China has the world's largest photovoltaic (PV) market, and its cumulative PV installation capacity reached more than 200 GW in 2019. However, a large gap remains to achieve the ambitious target of 1200.

What is distributed energy storage & generator cooperative distribution network operation mode?

This distributed energy, energy storage, and generator cooperative distribution network operation mode intuitively reflects the important role of energy storage in suppressing power fluctuations, peak shaving, and valley filling strategies, as well as converting the abandoned power into usable energy to supply the key loads.

What is distributed solar generation?

Distributed solar generation (DSG) has been growing over the previous years because of its numerous advantages of being sustainable, flexible, reliable, and increasingly affordable. DSG is a broad and multidisciplinary research field because it relates to various fields in engineering, social sciences, economics, public policy, and others.

What is energy storage in a distributed PV distribution network?

The energy storage system is connected to the distribution network, and the two storage systems assume the responsibility of supplying power to some nodes. The introduction of energy storage in the distributed PV distribution network reduces the dependence on thermal generators and improves the rate of elimination and economy.

What is a distributed new-energy power generation system?

Distributed new-energy power generation systems are generally small in size and have limited access to the distribution network; therefore, it is necessary to use an appropriate power management method to ensure its orderly operation .
