

## **EQACC SOLAR**

# **Do solar container communication station batteries need to be grounded**

Deye inverters and Deye batteries  
are more compatible.

## Overview

---

Why do battery energy storage systems need grounding and bonding?

For grid-scale battery energy storage systems (BESS), grounding and bonding is essential for safety and performance. The goal of grounding and bonding is to achieve customer-targeted resistance levels. These low resistance levels allow fault currents to easily discharge into the ground, protecting people, equipment and the BESS itself.

Do PV systems need grounding?

It is a mandatory practice required by NEC and IEC codes to protect both equipment and personnel from damage and electric shock hazards. This article covers grounding in PV systems, which differs slightly from standard grounding systems.

Do I need a DC grounding system for a stationary off-grid system?

In a stationary off-grid system, a separate DC grounding system should be used for the charger, batteries, and inverter input, independent of the household AC grounding system, to avoid interference.

Why is grounding important in battery management systems (BMS)?

Grounding in Battery Management Systems (BMS) is crucial for ensuring voltage and current measurement accuracy. Accurate voltage measurements depend on a stable ground reference. If the BMS ground is improperly connected or affected by noise, voltage readings can become distorted.
