

EQACC SOLAR

**Do you want to buy solar panels
for outdoor energy**

Overview

How much do garden solar panels cost?

Garden solar panels function like traditional solar panels but are ground-mounted instead of roof-mounted and placed in your garden. They are typically more expensive than regular solar panels, costing approximately £11,700 for a 4kW system, but can help you save £1,304 annually on electricity costs.

Do garden solar panels save money?

For example, a 4kW solar system installed in a garden can save around £1,304 annually, which translates to approximately £16,500 in savings over 25 years. These substantial savings make garden solar panels an attractive option for UK homeowners looking to reduce their energy costs and embrace renewable energy.

Are solar panels a good option for your home?

Residential solar panels allow you to pull less energy from the grid. With the addition of solar batteries, solar panels could make your home self-reliant and independent from the electric grid. Solar batteries store energy created during sunny hours, allowing it to be used at night or on cloudy days.

Are garden solar panels a good alternative?

As a result, garden solar panels are an alternative for those still seeking the advantages of solar energy. There are different garden solar panels: ground-mounted solar panels, solar panels on your garden roof and portable solar panels. These types will be explained in further detail for a better understanding.
