

**EQACC SOLAR**

# **Double-sided solar panel charging**

## Overview

---

What is a bifacial solar panel?

As the name implies, a bifacial solar panel is a module that has photovoltaic cells on both the front and back sides, designed to capture sunlight from both sides of the panel. Unlike traditional solar panels that only collect light from the front, bifacial panels harness energy from both their front and back surfaces.

Do bifacial solar panels produce more energy?

Bifacial solar modules use both sides of the panel to produce energy. Manufacturers say that bifacial solar panels can generate up to 30% more energy than monofacial panels. Great news for those with limited roof space. Most bifacial panels are frameless and covered by tempered glass on both sides.

Are bifacial solar panels better than monofacial panels?

The technology behind solar panels continues to evolve and improve. Manufacturers are now able to produce bifacial panels, which feature energy-producing solar cells on both sides of the panel. With two faces capable of absorbing sunlight, bifacial solar panels can be more efficient than traditional monofacial panels – if used appropriately.

Which bifacial solar panels are best?

For those seeking high-quality bifacial solar panels, the Renogy Bifacial 220 Watt 12 Volt Monocrystalline Solar Panel is an excellent option. With its advanced bifacial design, this panel can generate up to 285 Watts, significantly outperforming traditional mono-facial panels.
