

**EQACC SOLAR**

# **Dutch school uses 40-foot photovoltaic shipping container**

## Overview

---

Can vessel-integrated photovoltaics be used in inland shipping fleets?

Researchers from Delft University of Technology in the Netherlands have looked at how vehicle-integrated photovoltaics (VIPV) could be applied in inland shipping fleets. They have developed a methodology to predict power production from vessel-integrated PV systems.

Can solar power be used in inland shipping?

For the first time in inland shipping, solar energy can be transferred directly to the vessel's drivetrain, advancing clean propulsion technology. The Blue Marline is the first inland shipping vessel capable of hybrid sailing with solar power. Wattlab.

Why should you choose LZY solar panels on shipping container?

Efficient hydraulics help get the solar panels ready quickly. Due to its construction, our solar panels on shipping container offers unmatched flexibility and maneuverability. Sensitive solar arrays can be effectively protected from storms, vandalism and all possible threats. What is LZY's mobile solar container?

.

How much energy does a PV system produce in the Netherlands?

According to our simulation, based on real characteristics and movement data of the Dutch inland shipping fleet, the specific annual PV energy yield for a container vessel is 857 Wh per Wp, and for a bulk vessel, is 843 Wh per Wp. These numbers are comparable with a rooftop PV system in the Netherlands which is around 950 Wh per Wp."
