# **EU Solar Energy Storage Container 80kWh**

## Overview

---

How does energy storage work in the EU?

The main energy storage method in the EU is by far 'pumped storage hydropower', which works by pumping water into reservoirs when there is an electricity surplus in the grid - for example on a sunny or windy day - and releasing it when more energy is needed.

How many battery energy storage systems did Europe<sup>1</sup> install in 2024?

In 2024, Europe<sup>1</sup> installed 21.9 GWh of battery energy storage systems (BESS), marking the eleventh year of record-breaking annual additions since 2013, when our records began. The latest additions take the total running European battery fleet to 61.1 GWh at the end of 2024.

How much battery storage capacity does the EU have?

Narrowing the scope to the European Union (EU), 18.5 GWh of BESS were installed across the bloc in 2024, equivalent to 85% of existing installations on the continent. As consequence, EU total operating battery storage capacity reached 49.1 GWh at the end of 2024.

Will EU-27 Bess reach 780 GWh by 2030?

According to our Mission Solar 2040 study, EU-27 BESS capacity must reach 780 GWh by 2030 to fully support the transition. First, the European Commission must adopt an Energy Storage Action Plan within a broader Flexibility Package, to harmonise markets, remove regulatory barriers, and ensure storage is integral to national energy strategies.

## EU Solar Energy Storage Container 80kWh

---

### Cost Comparison of Container Energy Storage Systems in the EU...

The adoption of renewable energy is accelerating across Europe, driven by the EU's commitment to achieving carbon neutrality by 2050. As part of this energy revolution, ...
