

EQACC SOLAR

Eastern European wind power station generators

LIQUID/AIR COOLING

PROTECTION IP54/IP55

PCS EMS

BATTERY /6000 CYCLES

Overview

Where did wind energy come from?

The wind energy industry in Europe dates back almost forty years, with the continent's first wind farm opening in 1982 on the Greek island of Kythnos. It had five turbines with a capacity of 20 kilowatts each. Almost 10 years later the world's first offshore wind farm was erected off the coast of Denmark.

What is the EU wind power package?

To accelerate wind energy manufacturing across Europe, the Commission presented the EU Wind Power Package in October 2023. It consists of 2 initiatives - the European Wind Power Action Plan and a communication on achieving the EU's offshore wind ambitions.

How has the EU helped develop wind power?

The EU has helped develop wind power thanks to its ambitious policies and investments. As 'first movers' in the industry, European companies have gained invaluable experience, starting with the first offshore wind farm in Denmark in 1991.

How many wind turbines have been built in Europe in 2024?

Besides the EU's record installations in 2024, over 30 new wind turbine manufacturing facilities had been announced across the continent by the end of the year. EU financial instruments, including the European Investment Bank (EIB) and the Innovation Fund are now supporting wind manufacturing projects in Europe.
