Energy storage batteries make money

Overview

The energy storage battery market generates substantial profits, estimated at around \$20 billion annually, with ongoing growth projected due to increasing adoption in renewable energy systems, electrification of vehicles, and grid stabilization measures. Do investors underestimate the value of energy storage?

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

How many batteries will the energy storage industry install in 2025?

Nearly a decade ago, when the energy storage market was in its infancy, an industry organization set a dreamy goal: By the end of 2025, the U.S. would deploy 35 gigawatts of batteries connected to the grid. So how'd the storage industry do?

In the third quarter, 4.7 gigawatts of batteries were installed.

Can lithium-ion batteries lower storage costs?

While lithium-ion batteries have dominated new installations, other startups are pursuing other technologies that could lower storage costs significantly. Sizable Energy is working on a novel way to store power in flexible reservoirs that float in the open ocean.

Should energy storage be undervalued?

The revenue potential of energy storage is often undervalued. Investors could adjust their evaluation approach to get a true estimate—improving profitability and supporting sustainability goals.
