

EQACC SOLAR

Energy storage container ips and pcs

Overview

What is energy storage container?

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.

What is a PCs power conversion system?

PCS is a high power density power conversion system for utility-scale battery energy storage systems (up to 1500 VDC). It is optimized for BESS integration into complex electrical grids and is based on our best-in-class liquid cooled power conversion platform, enabling greater scalability and efficiency. Key highlights.

What is a mobile energy storage system?

On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions. Maximum safety utilizing the safe type of LFP battery (LiFePO₄) combined with an intelligent 3-level battery management system (BMS);.

How can a mobile energy storage system help a construction site?

Integrate solar, storage, and charging stations to provide more green and low-carbon energy. On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions.
