Energy storage exports to Europe and the United States

Overview

How much energy does the United States export in 2024?

In 2024, the United States exported about 30% of its domestic primary energy production. This percentage has grown considerably in recent decades, according to data in our Monthly Energy Review. Nearly all of the exports were fossil fuels destined for other countries in North America, Europe, or Asia.

Which country exports the most energy in 2024?

Nearly all of the exports were fossil fuels destined for other countries in North America, Europe, or Asia. The United States set multiple records for energy production and exports in 2024. Of the record 103 quadrillion British thermal units (quads) of total primary energy production in the United States, a record 31 quads went to other countries.

Is the US a net exporter of energy?

The U.S. is a net exporter of energy, meaning it exports more than it imports. That said, the U.S. imports some energy, with imports of crude oil, natural gas, electricity, and uranium products helping meet domestic demands.

Where does the United States import energy?

That said, the U.S. imports some energy, with imports of crude oil, natural gas, electricity, and uranium products helping meet domestic demands. These imports come from a variety of trading partners across the globe, including Canada, Mexico, Saudi Arabia, Iraq, and Colombia. The United States is a major global energy provider.
