# **Energy storage project construction costs**

## Overview

---

How much does it cost to build an energy storage system?

Enel X referred to a recent survey of energy storage systems report that found they typically cost US\$1 million per megawatt to build. “We are purchasing it, we’re building it together with subcontractors, and we’ll own and operate the system on the behalf, collectively, of Imperial and ourselves,” Martin said.

What is an energy storage project?

An energy storage project is a cluster of battery banks (or modules) that are connected to the electrical grid. These battery banks are roughly the same size as a shipping container. These are also called Battery Energy Storage Systems (BESS), or grid-scale/utility-scale energy storage or battery storage systems.

How much energy does a construction project cost?

In construction projects, energy costs can account for up to 5.7% of the budget. It is difficult to measure exact energy costs, but when diesel prices increase, so do construction costs.

How much does a battery project cost?

Developer premiums and development expenses - depending on the project's attractiveness, these can range from £50k/MW to £100k/MW. Financing and transaction costs - at current interest rates, these can be around 20% of total project costs. 68% of battery project costs range between £400k/MW and £700k/MW.
